

The growth of Exchange Traded Funds has been driven by an innovative eco-system of fund & index providers, investors and market facilitators. Despite the transformative impact of ETFs, no data provider was specifically focused on the needs of the ETF community. First Bridge Data was founded in 2010 with the belief that specialized ETF data is essential for supporting continued innovation and transparency in the ETF industry.

Today, our clients use ETF data & analytics to identify new product opportunities, generate investment insights and to help manage risk & compliance.

Leading Index Provider

Using data for planning new products, competitive analysis and client billing.

Fintech Startup

Using data to power their ETF screener and financial software functionality.

Bond Research Firm

Using data to analyze constituent pricing in municipal bond ETFs.

\$10B+ Hedge Fund

Using data to identify trading opportunities in alternative ETFs.

Our solution sets reflect a deep understanding of ETF structures and their underlying methodologies.

First Bridge – Solution Sets

ETF Analytics Platform

Interactive, visual dashboards covering all ETFs listed globally:

- All new launches worldwide with breakdowns by strategy, sponsor & region.
- 'Smart beta' framework with multi-level drilldowns.
- ETF Sponsor – Index Provider partnering statistics.
- Expense ratio ranges by ETF category.

Reference & Holdings Data Feed

Granular data that captures investment objectives and constituents:

- Index weighting, type of exposure and smart / traditional beta/ active ETF type.
- End of day constituent holdings for US ETFs.
- Historical ETF changes by type of change e.g. rebalance vs. corporate action.
- Classification of all ETFs by specific index and fund family.
